

Useful TIPS for quality APP Building?

1. Design

The first step is to choose the images for your home page. The images you upload cannot be larger than 2000x2000px (Width x Height).

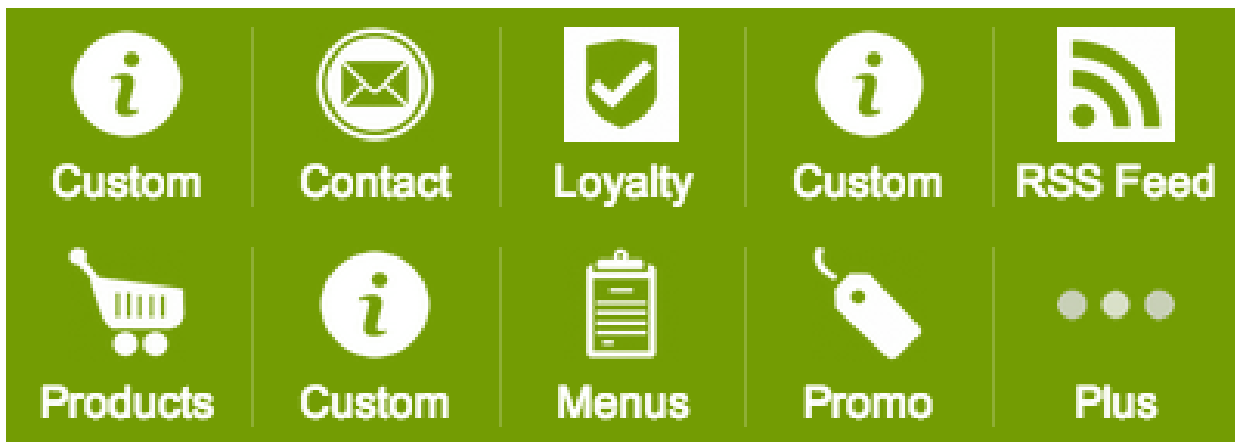

Choose your desired layout from our readymade templates:

Icon Suggestions – Single Row Menu

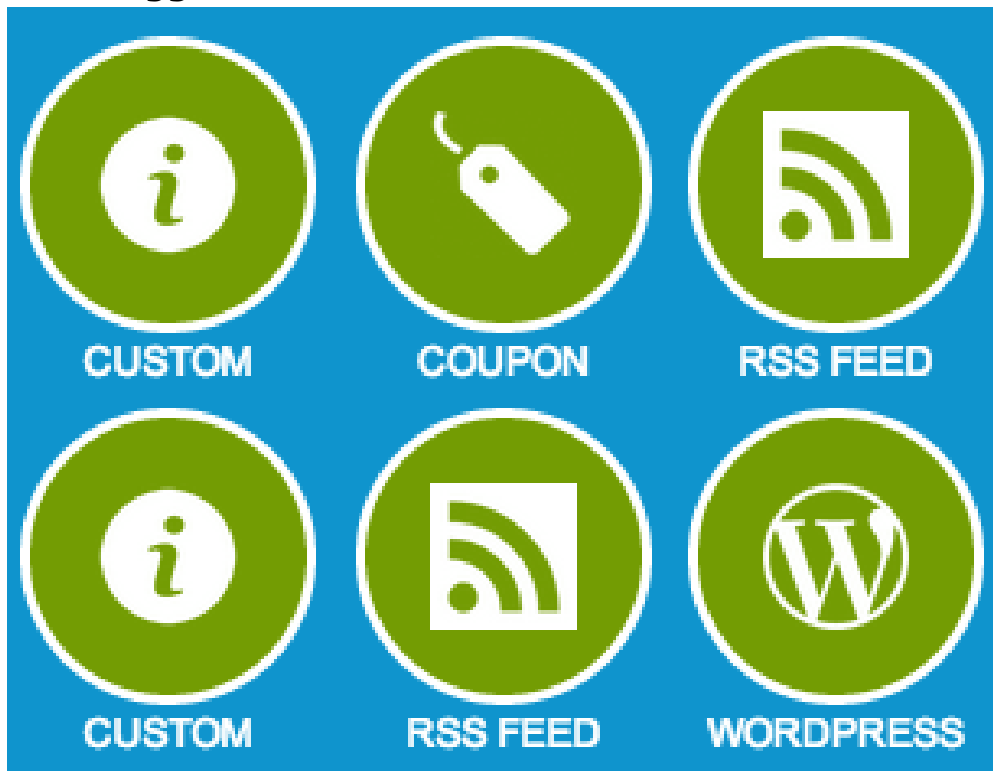

Icon Suggestions – Two Row Menu

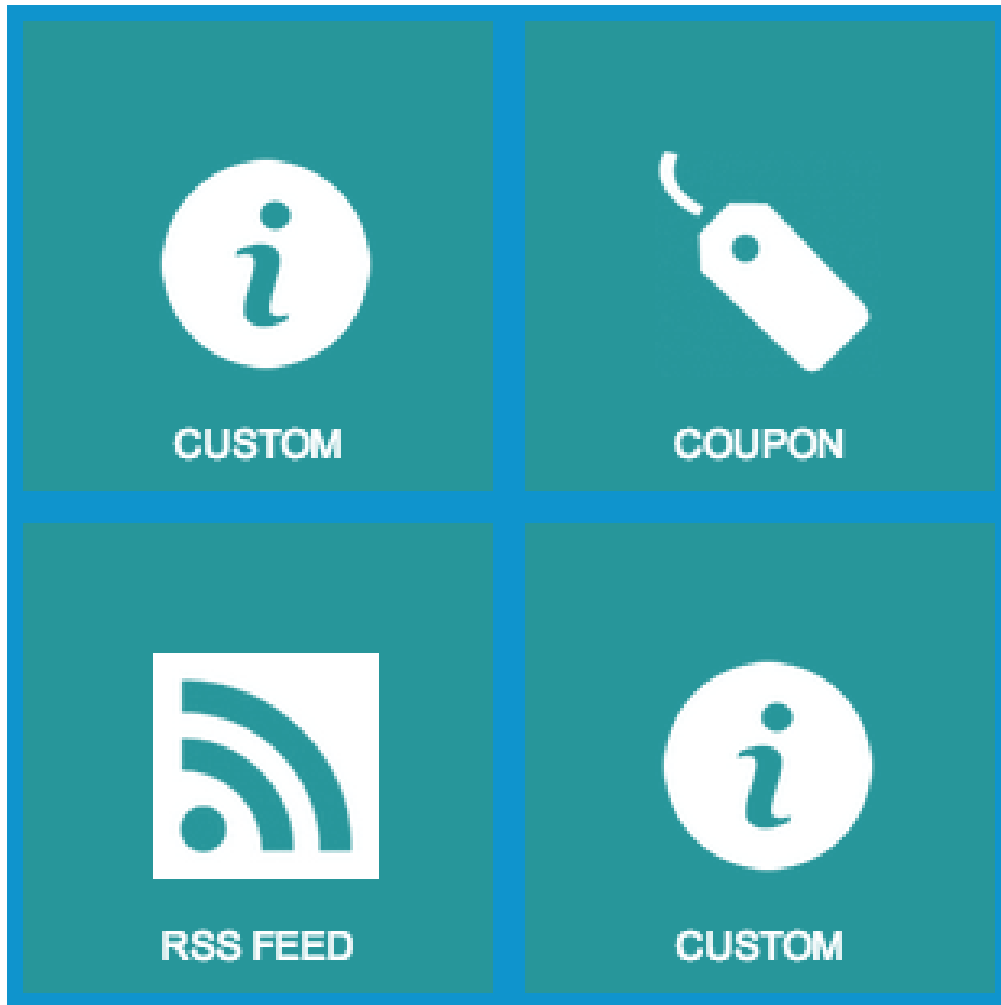

Icon Suggestions – 6 Square Menu

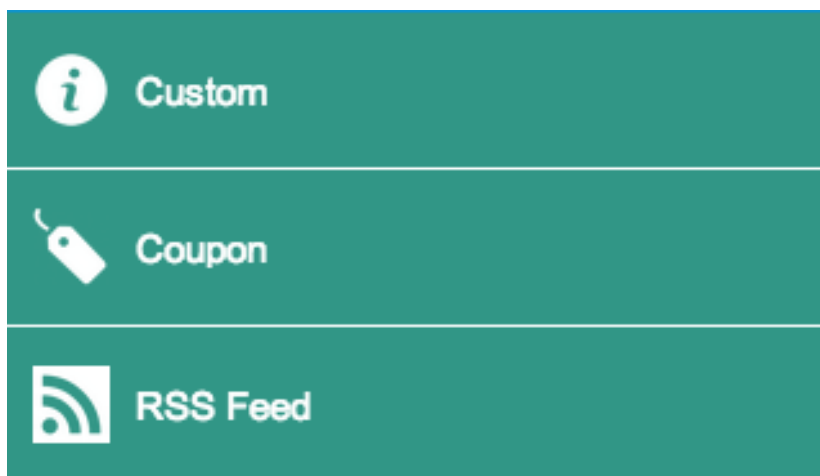

Icon Suggestions – Six Round Menu

Icon Suggestions – Four Square Menu

Icon Suggestions – Horizontal Menu

Icon Suggestion – Vertical Menu

2. Menu Colors – Fonts

Keep in mind that **Apple will not validate your application if you choose a kaleidoscope of clashing colors.**

Avoid fluorescent colors in particular and you will have the best chances of having your application accepted by Apple.

If you are not an expert, keep it simple, for example with white letters on any dark color background.

Here you will be able to choose the colors of your application. Click on the elements to the left and you will see on the right in the preview that the element in question will twinkle for a few seconds. Here are a few explanations to get you started using the graphics palette:

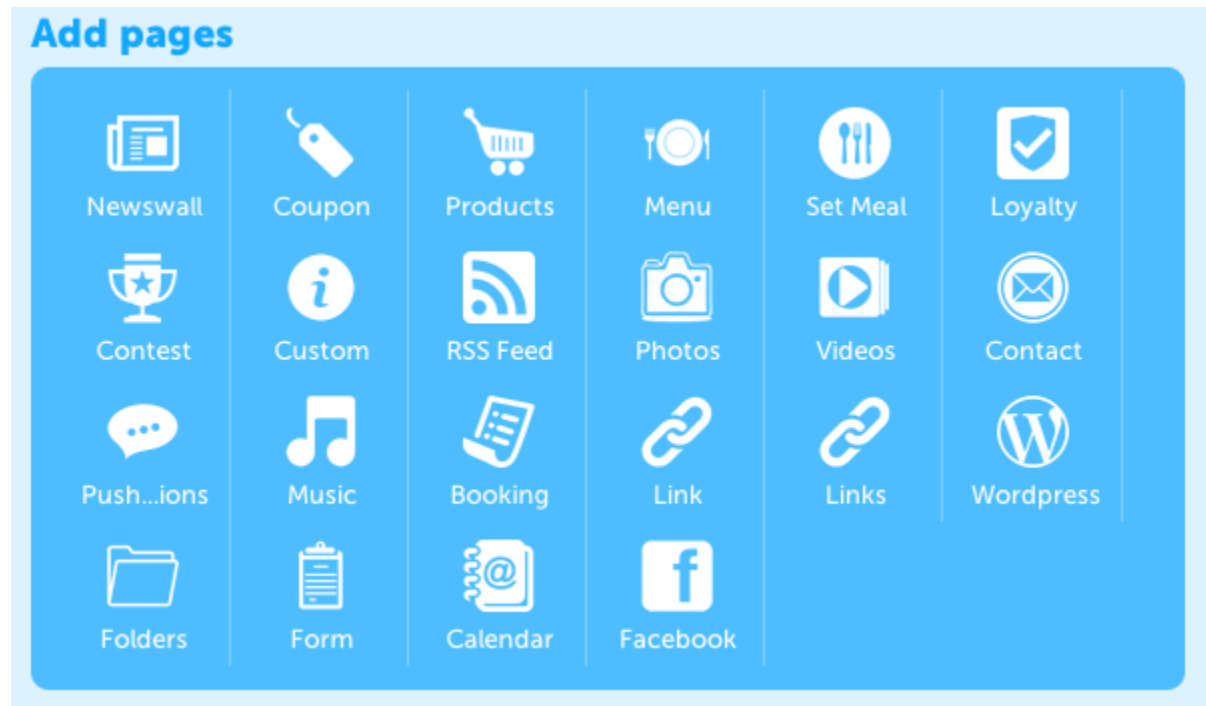

You may begin by using your mouse to choose the color spectrum that you are looking for and then choose the hue. If you know the color's hexadecimal code (or RGB), you may directly type this code into the fields provided and then click Enter.

3. Features

Adding pages / features to your application:

To add pages / features to your application, just click on the features that you wish to add from the icons list:

Each page corresponds with a feature. This means that each page will have a specific format and function. For example, "News" enables you to display a short news brief and an optional photo to illustrate it, and gives the users of the application the opportunity to give feedback on the news. "Discounts" enables you to create a page with one or more discounts, and so on.

Fill in a page / feature:

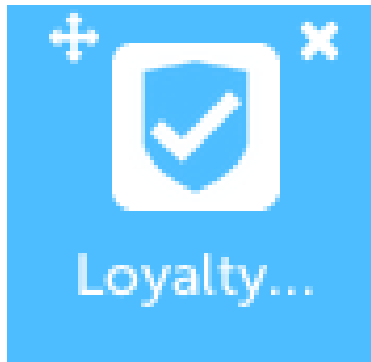

To create and configure a new feature, please click on the  on the right:

Then fill in the fields according to the features. To get help on the various features, use the help option (click on "display help") at the top right of the editor page and/or consult our features heading.

To rearrange the page order of your application:

At this point, you have added pages to your application and would like to change the page order. To do so, just hover the mouse over one of your features in "Your pages".

You will see this icon . Click, drag and drop the icon from your page to the position where you would like it to be. The modification will be visible in the application preview to the right.

Please check your APPS using APPSWW PREVIWER before publishing and make necessary changes if required in real time for FREE.

You may download our APPSWW Previewer in Android or Apple by searching the keyword – **APPSWW**.

Do not forget to read the TIPS section, which helps you to avoid any rejection by Apple or Android while building your APP.

You may email us at – support@appsww.com for any assistance. Only PAID members enquiries are addressed in less than 24 Business Hours.
